Visual Art 2025

Sample teaching, learning and assessment plan

Unit 3: Art as knowledge

Unit description

In Unit 3, students frame a self-directed inquiry question in response to a teacher-facilitated direct stimulus or first-hand experience. Through independent investigation of their inquiry question and application of critical thinking skills, students build knowledge about art, artist and audience to generate a personal focus and commence a body of work. They explore the concept ‘art as knowledge’ as they employ new knowledge inspired by their personal interests, beliefs and observations of the world.

Students use the contemporary, personal, cultural and/or formal contexts to study selected artists and explore expression, different layers of meaning and diverse interpretations of artworks. In this unit, students enrich their knowledge and aesthetic experience of their world through making and responding. Informed by their knowledge of art practices, experiences, history and influences, they embark on a body of work that visually and intellectually engages the audience — perhaps through sensory experiences, or by provoking conversation, inspiring action or challenging expectations.

Students use inquiry learning to develop, research, reflect and resolve artworks using visual language, media areas and approaches selected for effective communication of intended meaning and their acquired knowledge. They recognise that art knowledge can be constructed and imaginative. Constructed knowledge challenges perceptions and the status quo, is intellectually engaging, innovative, provocative, can present alternative futures, and may involve interpretation from a different context. Imaginative knowledge can entertain, express, record, invent, encapsulate the human condition, and may require the suspension of disbelief. Students may connect to other learning and subject disciplines to enrich their intellectual inquiry and approaches.

As audience, students consider what one can learn from works of art and how prior knowledge of culture and society influences our systems of decoding visual language. As artists, students consider what knowledge an artist requires to inform their art practice, and what knowledge and understanding an artwork can convey.

Unit objectives

1. Implement ideas and representations to communicate knowledge gained through self-directed inquiry.
2. Apply literacy skills to communicate knowledge of art practices and individualised ideas.
3. Analyse and interpret visual language, expression and meaning in contemporary and traditional artworks and practices using the contemporary, personal, cultural and/or formal contexts.
4. Evaluate influences to inform student-directed making and responding.
5. Justify decisions and informed viewpoints using knowledge gained through self-directed inquiry.
6. Experiment with visual language, expression and media in response to a self-directed inquiry.
7. Create visual responses using knowledge and understanding of media gained through self-directed inquiry.
8. Realise responses to communicate meaning defined by the self-directed inquiry.

Assessment plan

Assessment details	%	Objectives to be assessed	Conditions	Date
Internal assessment 1: Investigation — inquiry phase 1 (20%)	20%	1. Implement ideas and representations through an inquiry question to generate relevant solutions in response to the defined stimulus. 2. Apply literacy skills using referencing, relevant visual art terminology and language conventions that recognise artwork features and practices. 3. Analyse and interpret key artists' works through specified context/s and in response to the inquiry question. 4. Evaluate influences of relevant primary sources and secondary sources in formulating ideas. 5. Justify viewpoints supported by ideas and information presented through the stimulus. 6. Experiment with visual forms and media in response to the stimulus and inquiry question. 8. Realise visual, written or spoken responses to communicate the body of work focus in response to the stimulus.	• Students can develop their responses in class time and their own time. • This is an individual task. **Response requirements** • Visual evidence, including experimental artworks, relevant annotated artworks, images and/or diagrams • Student-selected media • Student choice of one of the following – Written: up to 2000 words – Multimodal (at least two modes delivered at the same time): up to 10 minutes (up to 2000 words or up to 12 presentation slides) – Digital presentation (e.g. video, digital book): up to 12 presentation slides (up to 2000 words or up to 10 minutes)	During the first half of the unit
Internal assessment 2: Project — inquiry phase 2 (25%)	25%	1. Implement ideas and representations to communicate concept, context/s the inquiry question and focus. 2. Apply literacy in artist's statement/s that make connections between the focus, inquiry and artwork/s using relevant visual art terminology and language conventions. 3. Analyse and interpret visual language, expression and meanings in artworks to explore student-directed focus through specified context/s. 4. Evaluate influences that impact on decisions and communication with audiences. 5. Justify viewpoints and selection of visual language and expression. 6. Experiment with media and ideas relevant to the focus and in response to the inquiry. 7. Create visual response/s using knowledge and understanding of media to complement the chosen focus. 8. Realise artwork/s to communicate artistic purpose and acquired knowledge.	• Students can develop their responses in class time and their own time. • This is an individual task. • The focus from Inquiry phase 1 assists communication of ideas and representations. The focus is not reassessed. **Response requirements** Evidence of IA1 (not for reassessment) • Written: inquiry question and focus from Inquiry phase 1. **Resolved artwork/s** • Student-selected media • Resolved artwork: unlimited pages/slides of photographic documentation, including images of detail and/or display; text to specify title, media and size only — one of the following – single resolved artwork – a collection of related, resolved artworks. **Artist's statement/s** Written: up to 150 words per statement (name, title, media and size are not included in word count) — one of the following: • one artist's statement for a single artwork or a collection of artworks • multiple statements for individual artworks in a collection.	At the end of the unit

			Annotations • Multimodal (at least two modes delivered at the same time): 1 page/slide with images of all resolved works in the submission and up to 200 words — one of the following: – annotations for a single artwork – annotations for a collection of artworks presented together on one page/slide. **Supporting evidence** Multimodal (at least two modes delivered at the same time): up to 4 pages, slides, or similar, containing experimental artwork/s, sketches, diagrams, graphic organisers, images, photographs and/or collections of stimulus with notes, annotations and/or reflective commentary.	

Teaching and learning plan

Time	Subject matter	Learning experiences	Resources
5 hours	**Developing** How do artists generate solutions to visual problems? Students: • develop a personal inquiry question to guide investigation and generate a self-directed focus, to inform art practice and solve visual problems • implement ideas for a personal inquiry through a teacher-facilitated direct stimulus or experience, e.g. – provocation from an expert lecture and/or class visit, editorial, article or symposium – excursion to a specific site, either art-related or drawing on local context and interests, e.g. environmental, social, historical or cultural – personal reaction, interest or story relevant to a specified text – scientific, philosophical or artistic process and experimentation – investigation of a historical event – presentation of empirical data (socio-economic, historical, scientific) – learning in another subject • implement visual ideas to communicate a student-directed focus that explores – innovative application of visual language and expression – multiple solutions to individually devised visual art problems – meaning and modes of communication in relevant contemporary and traditional artworks and practices – the qualities and characteristics of suitable art materials, techniques, technologies and processes • create – visual responses to communicate contemporary, personal, cultural and/or formal theories and ideas through application of visual language in student's choice of media	**Teacher-directed inquiry: How can I gather evidence from my environment to make artworks that communicate my reaction to familiar spaces?'** Guide students through the case study below by highlighting the characteristics of the artist's practice and leading a discussion on her investigation of the world around her. **Responding:** • **Case study: Key artist 1 — Candy Jernigan** (American artists, 1952–1991) – Art practice ▪ Jernigan collected physical, psychological, personal and abandoned evidence of what she encountered daily ▪ she worked in a contemporary context that pushed the boundaries of traditional art practices and employed a scientific and almost forensic approach to collect 'proof of her existence' ▪ her focus was on collecting visual information about a moment or a place she encountered ▪ she transformed trash and mundane everyday objects into art ▪ she 'always looked down' and wanted audiences to view what was most banal and make the audience 'desire the undesirable'. • Lead a discussion — How do artists investigate the world around them and document what they see? – View Jernigan's body of work – Guiding questions — consider ▪ What is ephemera? When does ephemera become art? ▪ What techniques does Jernigan use to display the ephemera she finds? e.g. archival systems, cataloguing, labelling and notations of time and place, reusable/resealable bags of evidence, use of grids and alignment of objects, mapping, using boxes to re-display ephemera, installation, observational drawings, art journals, use of text. • Independent reverse chronology investigation — Compare art practices of Candy Jernigan, Eugene Carchesio and Joseph Cornell.	**Candy Jernigan** • Jernigan, C 1999, Evidence: The Art of Candy Jernigan, Chronicle Books, San Francisco, ISBN 10: 0811823075; ISBN 13: 978081182 3074 **Eugene Carchesio** • Eugene Carchesio, *Dead Leaves of Tokyo,* 1999 https://learning.qagoma.qld.gov.au/artworks/dead-leaves-of-tokyo/ **Joseph Cornell** • The Guardian, 'Joseph Cornell: how the reclusive artist conquered the art world — from his mum's basement', https://www.theguardian.com/artanddesign/2015/jul/25/joseph-cornell-wanderlust-royal-academy-exhibition-london

	– meaning through the knowledge, understanding and application of art materials, techniques, technologies and processes developed through research and experimentation • develop an aesthetic that becomes increasingly personal and selective • develop and use appropriate health and safety practices that consider the impact of their arts practice on themselves and their environment. **Researching** How do artists react to stimulus? Students: • research individual approaches as they react to stimulus through an inquiry question to deepen analytical thinking and build constructed and imaginative knowledge • analyse and compare past and present artworks through selected contexts to interpret multiple perspectives and evaluate how these offer layers of meaning and dialogue between artist and audience in relation to the student focus. Through – making, students can experiment with visual language, expression and media that are developed and evaluated under various contexts – responding, students examine and interpret artworks and practices by questioning the influences and theories of key artists from various contexts and times to build on their knowledge of diverse visual language and influences • extend intellectual inquiry of identified areas of interest and inform art practice with research beyond art-related learning, such as other subject areas and disciplines, e.g. literature, historical, environmental or social artefacts and texts, or areas of personal interest • analyse and interpret the work of artists who demonstrate intellectual flexibility through combinations of art and identified areas of interest • analyse and interpret – artworks through teacher-directed, reverse chronology case studies to examine historical influences on contemporary artists and examine how they acquire and transmit knowledge through their current art practice – artworks in student-directed, reverse chronology case studies to investigate historical influences on key contemporary artists who engage with similar focuses and ideas – artworks including those by Aboriginal artists and artists from the Torres Strait Islands, artists from the Pacific Islands and artists from Asia • experiment with – observation by collecting, compiling and recording visual, verbal and sensory information and primary sources as evidence of direct stimulus or experience, such as, photographs, drawings, collected objects, video, interviews, data and annotated observations – art materials, techniques, technologies and processes that reflect the influences of key artists – selection, manipulation and exploitation of media to give form and meaning to ideas, images and objects – limitations of selected media to exploit intrinsic qualities – design and selection of options for display and exhibition of works to enhance meaning.	**Making:** • Students visually document evidence of their existence over one day. Suggestions for collection focus include – the journey to and from school – signage or text encountered – abandoned evidence of the waste or pollution created by the student – a personal habit or ritual performed during that day – encountered sounds – consumed food – calories burned or other physiological data collection – interactions with different categories of people – psychological reactions experienced – the number of steps taken and mapped – evidence of exact geographic location every hour over the 12 hours – a record of all the questions asked in one day. • Guide Making through inquiry-learning processes. • Students: – research — use Candy Jernigan as inspiration to define the type of evidence collected over the day. Experiment with traditional and new media methods to collect and document evidence – reflect — consider how context shapes and refines the focus and collection of evidence. Evaluate the collected evidence and attempt to categorise or archive it and create a reflective commentary – develop — implement visual language to communicate individual interpretation of the evidence they have collected. Create multiple solutions to display the collected evidence – resolve — use key artist Candy Jernigan as inspiration to determine a solution to display evidence as artwork. Consider how experiences of the collecting process can be communicated to audience through display.	
5 hours		**Teacher-guided investigation — artists responding to stimulus (known urban environment)** Mini excursion: Students navigate and document a familiar location in the community, e.g. a community farmers' market, such as Rusty's Markets in Cairns **Making and responding:** • Prior to the visit, students – use a graphic organiser to collect existing knowledge of a familiar location; share their experiences in small groups; collaborate to compile combined class knowledge – review how the different contexts can frame their investigation of the location. • During the visit, guide questions and activities to direct student responses to – personal context ▪ How do you feel when you enter this space? ▪ What physiological reactions do you have when you enter this space? ▪ As you move through the space, what personal impact are you having upon the space? ▪ Do you have any personal family stories about or connections to this location? ▪ Does your family have a tradition of coming to this location? ▪ Engage your five senses — use multimodal techniques to document what you see, taste, touch, smell, hear.	

	Reflecting How do artists consider ideas and information, media techniques and processes? Students: • reflect on self-directed investigation and artmaking as they consider and make informed judgments and decisions about the artwork and practices of self and others • evaluate – a range of primary sources and secondary sources, art practices and art approaches from diverse traditions, cultures and theories to guide investigation and inform student focus and making – knowledge from other subject disciplines that can enrich intellectual flexibility and provide innovative approaches for their focus and body of work – the roles of artists and their function in a range of contexts – meaning of focus and concepts that can be communicated through various contexts, visual objects, imagery and expression – their depth of knowledge in response to their inquiry question, and identify areas for further investigation – how artists can challenge, reinforce or manipulate ideas, beliefs and meaning through making and displaying artworks – the display of their own artwork to gain insight into audience reaction and the realisation of intentions • justify – individual art practice by documenting process to make meaningful connections and inform the progress of investigating, student focus, experimenting and making – their ideas, media, techniques and approaches when developing visual artworks and expression – their choices of key artists and selected approaches using informed, self-directed, personal viewpoints – a position when making informed judgments about an artist's body of work by synthesising information and ideas, such as the artist's background knowledge, influences and aesthetic choices • participate in an authentic experience as artist or audience; experiences can be offered by – visits to galleries, artist-run spaces, studios, artist collectives, offices of visual art organisations and urban and rural environments to understand the contribution of artists and the arts industry – incursions, invited guests such as artists-in-residence or collaborating with artists and community engagement; or exhibition, in the role of both artist and critic • reflect on, thoughtfully consider and explore alternatives to guide future research, development and resolution of their body of work.	– cultural context ▪ What is the written and unwritten history of this place? ▪ How has the use of this space changed and evolved over the years? ▪ Is there any evidence of the traditional owners of this place or the cultural groups that historically were important to the development of this location? ▪ What are the different socio-economic groups and subcultures that interact in this space? ▪ What variety of cultures and races interact in this space, and what evidence is there of these cultures? ▪ What harmonies or conflicts exist between the people who use this space? ▪ What different transactional relationships are happening in the space, e.g. buyers, sellers, producers, consumers, tourists, locals, chefs, mums? ▪ Use multimodal techniques to document languages (words, phrases and text) used in this space. – contemporary context ▪ What data, readings and records can you take to capture the types of activities in the space? ▪ What technology could you use to isolate one type of sensory information from this environment? ▪ How are spaces and boundaries defined in this space? ▪ Bag, tag and categorise a wide variety of specimens you have collected while on location at this site. ▪ Create your own ultra-kitsch Cairns souvenir to parody the types of artefacts and objects that are targeted at tourists. ▪ Map the location to show its features, landforms and contours. ▪ Collaborate with one or more of the store holders to communicate their history at the site and what they think is significant about the location. – formal context ▪ What are the dominant forms, lines, colours, textures and shapes encountered in natural objects or built structures? ▪ What symbols and codes can you identify that are unique to this place? ▪ Create a series of observational and analytical studies of some of the most unusual fruits and vegetables you observed. ▪ Take rubbings and collect frottage of the textures encountered in the site. ▪ Represent the signs and symbols you observed in the location. ▪ Collect evidence with a focus on a single element of design (e.g. the colour green) and represent this evidence to try and communicate something about the diversity of the site. **Making and responding:** • After the visit, students – use the inquiry learning model to create an artwork in response to their collected evidence and their experience of a familiar location – write a 150-word artist's statement that explains the focus explored and how visual language was used to communicate meaning.	
7 hours	**Resolving** How do artists communicate individual ideas as visual, written or spoken responses? Students: • resolve their body of work as they communicate in visual, written or spoken responses • apply	**Independent investigation — journey to an unknown terrain** Teacher-facilitated direct stimulus: Take an excursion to an unknown environment to collect first-hand sensory experience and evidence. • Consider options, such as – a three-day camping trip to a remote location, e.g. Chillagoe (approximately 450 km west of Cairns)	**Tijn Meulendijks** • *Tijn Meulendijks*, www.tijnmeulendijks.com **Mandy Martin** • *Mandy Martin, https://mandymartinartist.com/* • *Roslyn oxley9 galle*ry, www.roslynoxley9.com.au/artists/25/Mandy_Martin • *Mandy Martin*, 'Next Exhibition: Triggers in the landscape',

- resolve their body of work as they communicate in visual, written or spoken responses
- visual art terminology when recognising and distinguishing features of artworks and practices of self and others
- language conventions to construct written responses that analyse, interpret, evaluate and justify visual language, expression and meaning in artworks
- referencing conventions to acknowledge sourced information and ideas when researching artists and their practices, and developing artwork approaches
- literacy skills to write artist's statement/s that
  - assist audience understanding of focus and artist's intentions
  - consider the role of the artist's statement to enable wider audiences to construct personal meaning and interpretations when viewing artwork
- critical literacies across visual, aural, kinaesthetic, spatial and multimodal devices to assist learning when interpreting and making meaning

• realise
- investigation to define a student-directed focus for the body of work
- intentions in the body of work by engaging with inquiry learning to guide experimentation and refine the application of knowledge and art media
- ideas about art-making approaches and theories to make and respond to artworks that develop their personal aesthetic
  - by manipulating and exploiting media to translate and interpret ideas and convey meaning in artwork/s defined by the student-directed focus
  - by considering how display possibilities and curatorial decisions can enhance the communication of art meaning and audience engagement.

Key terminology

How do artists and audiences write and talk about art?

Students:

• build on and apply visual art terminology when writing about and talking about artworks of self and others as they become familiar with the following key terms
- annotation — a brief note to highlight or draw attention to a particular feature in an image or diagram
- audience engagement — experience of an artwork by deliberately drawing the attention of the audience in a sensory, emotional, personal or meaningful way; artists may consider the potential engagement or reactions of the audience when developing ideas and art forms
- constructed knowledge — resulting from a synthesis of research and experiences; challenging perceptions and the status quo, is intellectually engaging, innovative, provocative, can present alternative futures, and may involve interpretation from a different context
- curatorial decisions — decisions that impact the selection, exhibition and display of artworks to engage audiences and communicate meaning

- an overnight camping trip to an island, e.g. Fitzroy Island (a 20-minute boat ride from Cairns) or Stradbroke Island (a 25-minute water taxi ride from Brisbane)
- a dawn to dusk 'magical mystery tour' to a previously unknown or overlooked environment.

• Stimulus includes
- preparation for the journey
- experience travelling to and from the site
- experiences on site
- culmination of the journey
- returning to the familiar.

• The role of accompanying teachers and mentor artists-in-residence is to
- produce artwork throughout the journey
- complete the same activities set for the students
- deliver artist workshops on location
- present a final resolved work alongside students at the conclusion of the journey.

Pre-journey activities

Responding:

• Investigate materials, techniques and systems students will employ to make sense of the location they are travelling to through research of key artists who respond to unknown or unfamiliar landscapes and locations

• Analyse and interpret through contexts, the way artists communicate meaning using materials and approaches, systems to organise sensory experiences and manipulation and exploitation of visual language.

Guide students through case studies such as those below by highlighting the characteristics of the artists' practice and analysing the context in which the work is produced.

Case studies could include:

• **Case study: Key artist 2 — Tijn Meulendijks** (Dutch-born, Cairns-based environmental installation artist)
- terrain explored
  - often works with or sources materials from rural or remote sites
  - also finds materials from abandoned urban/city sites, e.g. weeds meticulously collected from an abandoned lot in Cairns
- analyse and interpret Meulendijks' art practice through contexts
  - contemporary context — relocation of raw natural materials, from environment to gallery, to question traditional art materials, art forms, and the role of the artist. Constructs raw materials into new forms while preserving natural colours, lines and shapes
  - personal context — influenced by lifelong interest in botany, how people respond to nature, experience in floral design and living between the Netherlands and Australia. Grouping of objects communicates a powerful documentation of what he has seen or experienced in the site
  - cultural context — concern for the environment and the perilous changes that transform it permanently; consideration of the way that seasons change a landscape, signs of deprivation, e.g. lack of water, lack of nutrients, lack of nurturing, stagnation. Looking for signs of abundance or prevalence — what is readily available all around and dominating the landscape
  - formal context — exploitation of line, texture, shape, colour; intent and cohesion communicated through rhythm, repetition, patterns and light/shadows of grouped objects; found materials are manipulated through

	– design — produce a plan, simulation, model or similar; plan, form or conceive in the mind – empirical data — knowledge acquired by means of the senses, particularly observation and experience; also known as sense experience – imaginative knowledge — resulting from a synthesis of experimentation and experiences; can entertain, express, record, invent, encapsulate the human condition, and may require the suspension of disbelief – intellectual flexibility — skill associated with critical thinking; ability to create links and think logically and creatively about a broad range of topics and ideas; use broad knowledge to adapt and make decisions in a range of situations – key artists — artists whose work and/or practices provide inspiration, have relevance to, and inform independent tasks and inquiry – mastery — demonstrating advanced skills, confidence and control with art media, selected approaches and/or aesthetic decisions to achieve artistic intentions – personal aesthetic — where the artist develops a particular style or expression that is individual and inventive; students take ownership of their own approaches and style even if these approaches or styles have been appropriated from or have seeds in other artists' work – primary sources — direct, original evidence, such as artworks and objects, artefacts, experiments, collected materials or observations of experience through moving image and visual forms – reflective commentary — observations, insights, and reflections on the artistic choices, themes, techniques and overall impact of an artwork – responding — writing or talking about art from the perspective of audience – secondary sources — another author or creator's response to primary sources; discussion, description, analysis, interpretation, evaluation found in sources such as books, articles, journals, reviews; representations of someone else's ideas – stimulus — a starting point or a catalyst for the artistic process, for example an object, a text, a scene, a historical event, a personal experience; artists interpret and transform a stimulus in unique ways to express individual ideas and concepts through artwork – visual inquiry — making artworks that explore ways to answer an inquiry question.	binding, weaving, coiling and carefully excavating objects; collections of materials and objects are carefully grouped or displayed en masse; repetition and isolation to focus attention on overlooked environmental forms; impact of scale on audience. • **Case study: Key artist 3 — Mandy Martin** (Australian painter, 1952–2021) – terrain explored ▪ early work — industrial zones on city fringes that encroach on the surrounding landscape ▪ later work — remote and arid deserts of Australia – analyse and interpret Martin's art practice through contexts ▪ contemporary context — communicates ideas about the landscape being a 'contested' site, either being challenged by the mining industry or being forced to change from urban development or returned to its original custodianship by local Indigenous people ▪ personal context — influenced by 19th century European landscape traditions and Orientalists; aims to depict grandeur ▪ of landscapes; incorporated knowledge and traditions of her home in central west NSW ▪ cultural context — impact of factories and built environment on natural landscapes; collaborations with local Indigenous artists who have a deeper knowledge of history and story association with the landscape; blending of cultures ▪ formal context — sources local pigments, sand and ochres from site and binds them with acrylic paint; landscapes use deep space, panoramic vistas and traditional compositions to communicate a sense of monumental scale; textures in the landscape are carefully recorded and rendered; heightened use of colour and strong pigments to communicate the power and intensity of the landscape; dramatic use of tone to capture atmosphere and mood; works on large scale. • **Case study: Key artist 4 — John Wolseley** (English-born Australian painter, born 1938) – terrain explored ▪ diversity across Simpson Desert, Tasmanian forests, remote north-west tidal reaches – analyse and interpret Wolseley's art practice through contexts ▪ contemporary context — makes artwork in collaboration with the natural world.; allows objects (charcoal-covered trees and mud) to make uncontrolled marks and rubbings on drawing surfaces, draws and paints back into these incidental marks with images of carefully observed botanical drawings ▪ cultural context — maps the landscape and shows the sedimentary history and fossilised evidence of what was once there; interested in the poetics of time and the impact of non-Indigenous people and plants on the Australian landscape; works are layered with records of his interactions and observations of the landscape ▪ personal context — intrigued by the cycles of renewal in the landscape, e.g. after bushfire and the regeneration that follows ▪ formal context — works are unified by natural stains and colours usually created by rubbings made by the paper coming in direct contact with the landscape; traces and tracks from these rubbings and indirect marks create delicate lines that traverse whole drawings. • **Case study: key artist 5 — Judy Watson** (Australian-born, Indigenous heritage — painting, drawing, printmaking, sculpture and video works) – terrain explored	

		▪ the Australian landscape and locations of significance to her Indigenous heritage – analyse and interpret Watson's art practice through contexts ▪ contemporary context — questions historical truths; places her canvas directly on the ground and allows colours and pigments to pool and find their own form as a reflection of the contours of the land; inscribes and engraves lines and marks back into her canvas to make a record of the past presence (human and botanical) that once inhabited the land ▪ personal context — traces her ancestral roots; map-like lines symbolise the charting of her cultural, spiritual and historical heritage; influenced by travel and cross-cultural connections; practice of collecting ▪ cultural context — diverse range of media to explore Indigenous connection to land and the history and artefacts that connect Indigenous people to sites; archival material and scientific data as a jumping-off point for environmental works, e.g. 'Heron Island' series ▪ formal context — uses colour to evoke emotion; fine linear tracings sit proud of the stained and mottled backgrounds of her works; overlays mapping and archival data to unify composition; recurring symbols; transparent and opaque layering. Further suggestions: John Pule, Rosalie Gascoigne, James Turrell, Jacqueline Scotcher, Donna Marcus, Jemima Wyman and Phoebe Paradise. **Making:** • Students produce a small 'boarding pass' to show that they are ready to begin the journey. Boarding passes could – be something that they wear, e.g. a lanyard, a piece of wearable art that they add to as they travel – be something that they carry with them throughout the whole journey, e.g. an artist's book, a collection of storage containers – communicate what they are leaving behind and putting out of their mind while they journey to this unknown location – communicate what they anticipate or hope to find – reflect the type of approaches used by key artists that they hope to implement along the way. **During the journey** **Making:** • In transit — create a small artwork (e.g. a postcard home) that reflects the way they are travelling to the location, e.g. the rhythm of the train to Chillagoe or the rolling of the boat as it heads across the ocean to Fitzroy Island; include captured language and text encountered, e.g. tour guides signalling significant locations they are passing through, or the hyperbole used by tourist brochures to promote the location to visitors • On location — complete workshops with local community and accompanying artists-in-residence to uncover ideas and stimulus, e.g. – presentation and discussion with local Indigenous custodians about the traditional ownership and history of the landscape – presentation and discussion with national park rangers about the history of the geographic forms and the flora and fauna of the land – observe and document how artists collect evidence and empirical data from the location and employ it in preliminary works that communicate their reaction to the landscape and location, e.g. Tijn Meulendijks conducts site-specific environmental installation works. Jacqueline Scotcher takes 'walks' through the landscape and uses mixed media paintings to record these wanderings (see her body of work, 'Wayfaring' at *Jacqueline Scotcher_Artist* under 'Gallery')	

		– experiment with plein-air painting and sketching to record key aspects of a variety of different locations • Conclusion of the journey — students present one semi-resolved work before they leave the location. The work – should capture an aspect of the landscape that intrigues them or that they may wish to explore further upon return to the classroom – could evolve from either the plein-air sessions, the artist-in-residence workshops or display evidence that they have been collecting throughout the journey – will be displayed in an open-air gallery on site – is presented to the group in a three-minute talk to communicate meaning, inspiration, and why it is significant to them.	
5 hours		**Post-journey activities** Primary response **Making:** • Students develop a semi-resolved work or works that – explore an aspect of the journey that remains embedded with them – reflect a growing personal investigation – will be displayed in the art block gallery for self and peer critique – use visual language to communicate meaning to audiences – address selected context/s • Guided inquiry questions for primary response – What senses remain with you upon your return from the location? – What event, memory or image stands out to you as a significant one? – What immediate visual response communicates what was most significant to you about your journey to this location? **Responding:** • Students – write an artist's statement (maximum 150 words) to accompany their primary response work. The statement should articulate the direction for their continued investigation into their journey ▪ identify personally relevant key artists who have explored a similar focus or approach ▪ annotate their reactions, thoughts or insights about these key artists. Secondary response • Students develop inquiry question ideas in response to the stimulus. • Workshop inquiry questions with students to evaluate and refine. Use the following reflection questions – Can this question be answered by any artwork? – Am I interested in researching this topic more? – Is there a context embedded in the question? – Is this something I want to make artworks about? • Students write their inquiry questions on a card to display above their working space or on a board in the classroom. Update cards as inquiry questions are further refined for the assessment. **Making:** • Students reflect on their primary response as they make an even more personalised, refined response to their journey. Challenge students to – dig deeper into their personal experience	Supporting resource: Stimulus and inquiry questions Supporting resource: Effective practices in Visual Art submissions

		– use mastery with art media, individualised approaches and aesthetic decisions to achieve artistic intentions – step away from obvious or literal representation to develop visual metaphors and symbol systems that communicate something more specific and personal, yet open to universal interpretation and engagement by audiences • Suggestions to develop responses – isolate only one sense and consider the ways this sensory data was captured by them as artists – exhaust the application of a single medium to communicate an idea or focus – apply the notion that 'In the particular is contained the universal' (James Joyce). **Responding:** • Students – continue to research relevant key artists and annotate their reactions, thoughts or insights about the relationship of artist practices to their focus and approaches – write an artist's statement (maximum 150 words) to accompany secondary response work. The statement should articulate refinement in the continued investigation and direction for the inquiry – present a viva-style oral to classmates where they discuss their primary and secondary responses through selected context/s, their inquiry question, and nature of the visual inquiry they are wishing to pursue in their focus and resolved artworks.	
8 hours		**Summative Internal assessment 1 (IA1): Investigation — Inquiry phase 1** **Making and responding:** • students – select two key artists who are most significant in informing the direction and nature of their personal inquiry – map the inter-connections they make between ▪ their initial reactions and experiences of their journey as stimulus ▪ their insights resulting from analysis and interpretation of the artwork of self and others ▪ their learnings resulting from the production of primary and secondary responses ▪ the evaluation of contemporary and/or historical influences of key artists on their inquiry – apply written literacy skills to communicate the course of their inquiry and to discuss the evidence that has informed their inquiry – present a clearly defined inquiry question and a defined personal focus that will drive the production of their body of work.	QCAA Portal resources Supporting resource: Investigation scaffold Supporting resource: Stimulus and inquiry questions IA2 student response template: Project — Inquiry phase 2 Supporting resource: Effective practices in Visual Art submissions
20 hours		**Summative Internal Assessment 2 (IA2): Project — Inquiry phase 2** **Making and responding:** • Students – work independently to make and display artwork that communicates the focus stated in IA1 – select media area/s to communicate focus and intentions – select and prepare IA2 submissions, including	

		▪ single resolved work or a collection of resolved artworks ▪ written artist's statement/s (maximum 150 words per statement) that includes title, media and size, and assists audience understanding of student focus and intended meaning ▪ written annotations (maximum 200 words) to justify their developing, researching and reflecting processes ▪ photographic or digital evidence of real or intended display of work ▪ supporting evidence that demonstrates their understanding of the connection between processes of conceptual development and the resolved work. **Role of the teacher:** • meet/consult regularly with students individually to monitor progress and provide formative feedback • facilitate peer feedback and sharing opportunities • present students with artists, artworks and processes that challenge, extend and refine ideas • assist students to recognise characteristics of resolved work.
